The President's Hatch

Well, sadly, not much has changed in relation to the worldwide pandemic. If anything, the situation is worse than it was when I last wrote the Hatch in August.

Good news though; fishing license and trout stamp purchases are significantly higher this year. That means more funding for the DNR and possibly more advocates for the outdoors, public access to fishing, and Iowa's parks. I'll take all of the good news that I can get.

Most of us in Dubuque have been focusing on local waters for our fly fishing outlet. Swiss Valley's Catfish Creek and Bankston Creek are the closest to Dubuque and are very popular. I learned to fly fish on Bankston Creek in the early 90's, but have rarely gone back there to fish in the 2000's. That changed this year for me and for several others in the DFF. Of course, due to flooding, the stream has changed a lot since I fished it almost every day during the summer of 1991. Fly fishing isn't all about catching fish. Going back to Bankston brought back many memories. The most enjoyable one is of watching a Cooper's Hawk sit motionless on a branch watching a Yellow Billed Cuckoo who was hiding along the bank sitting on exposed roots along the bank. This went on for about 20 minutes, neither one moving a feather, until I decided to move upstream to fish. There's also the memory of falling about four feet down and landing on my

John Carl Miller

side in the stream at 6:30 AM. I didn't even break the fly rod, as I held it high as I fell. Then again, I broke a fly rod for the first time on Bankston Creek, a beautiful G-Lomis GL-3 that Bill Sherer had custom wrapped in a beautiful diamond pattern. He re-wrapped the tip section, but said that was the end of the warranty. It's a wonderful casting six and a half foot rod that is perfect for small streams. I used it a ton for many years, especially in South Dakota, but rarely use it now. Maybe this next year will be the year to change that.

The Hawkeye Fly Fishing Association is now negotiating on a "Signature Project" that would purchase an easement

on a trout stream. This is the most exciting thing that I have ever been involved in. We should know more by the April newsletter.

The HFFA has also done its part to promote our sport and to keep Iowa's waters clean. In the past year, we have:

1. Helped fund land acquisition on Bloody Run that will provide 6/10 of 1 mile of stream access,
2. Helped fund land acquisition on Ten Mile Creek that will provide 1000 feet of stream access,
3. Supported the maintenance of the North/South Bear Port-a-Potties,
4. Contributed to a fencing project that will protect a portion of the Maquoketa River.
5. In addition, the club now has a digital projector that can be used at annual meetings and by our local clubs for group presentations.

None of this would be possible without the support of the loyal members of the Hawkeye Fly Fishing Association. I thank you all from the bottom of my heart.

John

Here is another Madison River resident. You can usually see them during the "magic hour" one mile west of the Madison Junction in Yellowstone. I finally got enough lens to bring him up close. Fishing is good in this section, but watch out for the buffalo. I had some tourists run a bunch down on top of me once. Don

HFFA Business Report

Minutes of HFFA Virtual Board of Directors Meeting November 19, 2020 Dave Jones

Meeting called to order by President John Miller at 7:00 PM

Attendees: John Miller, Ron Stahlberg, Kate Lodge, John Channon, Willa Campbell, Mike Stallsmith, Dave Jones and Martin Acerbo

Welcome from John Miller

1. Easement acquisition: John Miller and Dave Jones reviewed a proposal to fund an easement acquisition from the Diane Rissman family on the Yellow River just downstream of Forest Mills Road. This easement opportunity is downstream of another easement put in place in 2018. The proposed easement opportunity covers .69 miles of the Yellow River covering 15.3 acres of property. The proposal also includes an additional 1.68 acres necessary to provide access and room for a parking lot. This area of the Yellow River has suitable water temperatures for trout, with multiple year classes of self-sustaining brown trout population having been sampled within this section of the stream. The total cost of the easement acquisition is \$42,450. HFFA officers have held discussions with ICC and three Iowa Trout Unlimited Chapters regarding their likely intention to support this project with a financial contribution. Dave Jones made the following motion: that HFFA commit to provide funding of \$42,450 less any funding provided by ICC and the three Iowa Trout Unlimited Chapters. After the motion was seconded, a unanimous roll call vote approved the motion to provide financial support for the easement acquisition on the Diane Rissman property located on the Yellow River. The board then authorized Dave Jones, as board secretary to submit a commitment letter of financial support to the DNR, so that they can start the necessary paperwork to complete the easement acquisition.

2. Elections: John Miller led a discussion about board and officer elections, considering that an in person annual meeting will likely not be held in 2021. After much discussion the board agreed to let the board members and officer positions stand until a business meeting is held at the next annual show.

3. 2021 Annual show: Martin Acerbo and John Miller led a discussion regarding a potential decision to cancel the 2021 Annual Show scheduled in Des Moines, given the current pandemic and its restrictions. After the motion was seconded, the board unanimously approved the cancellation of the 2021 Annual Show.

4. Membership: Ron Stahlberg and Willa Campbell led a discussion about current membership fees in light of the impact of the current pandemic and its restrictions on HFFA activities and the annual show. Membership enrollments have traditionally taken place during the registration process for each annual show. Since there will not be an annual show this year and since a separate membership recruiting campaign will be difficult given pandemic conditions, the board discussed extending membership privileges to all members in good standing during 2020. After the motion was seconded, the board unanimously approved extending membership privileges for 2021.

5. Financial Reporting: John Miller and the board discussed the income statement and conservation funding report for the 12 month period ending September 30, 2020 shared by Treasurer, Brad Mullin. Dave Jones did remind the board that the current cash balance was \$88,926 as of November 14, 2020.

6. Future Dates for Annual Shows: Although the board did discuss locations for the annual shows for 2022 through 2026, no formal action was taken.

7. Protecting Outstanding Iowa Waters: Martin Acerbo led group discussion regarding a request from Steve Veysey, HFFA Coordinator of Fisheries and Environmental Protection, for contingency funding not to exceed \$1,000 that would cover the cost of open records requests and possible experts to assist Steve with the review of the Nutrient Management Plan for a potential large beef feedlot development near Bloody Run Creek. After the motion was seconded, the board unanimously approved contingency funding not to exceed \$1,000 to cover the cost of open records request and possible experts in the review of the Nutrient Management Plan for a potential feedlot development near Bloody Run Creek.

Meeting Adjourned

Dave

**Membership Committee Addendum
Ron Stahlberg**

Membership Renewals:

With the annual meeting being postponed until 2022, you might be wondering what about membership renewals? Many of us use that event as our annual signal to once again send in our dues for the coming year.

The past few months have been hard on everyone. While the Flyline has been a much needed and welcomed diversion when it appears in our inboxes, the other things that we associate with HFFA membership have taken an extended hiatus. With no in-person meetings, it has been tough for the club to offer much in the way of activities, and that now includes our annual get together. In light of the challenging times and in realization that we haven't had much to offer, the board has decided to waive all membership fees for currently active members in the upcoming year. This means that if your dues were paid up through 2020, your membership is considered active and paid through 2021.

However, the good work of the HFFA continues, even in a pandemic. Without in-person meetings, we continue to work the DNR and others to protect and preserve our fishing resources. If you would like to use this opportunity to take what would have been your membership dues and view them as a tax-deductible contribution to these efforts, please feel free to send them to the club at:

**Hawkeye Fly Fishing Association
P.O. Box 8145
Cedar Rapids, IA 52408**

Please indicate if you would like to pay the 2022 dues or just use this as a contribution for our conservation and outreach efforts.

Tight lines!

Ron

Editors Notes

1. Once again I want to thanks Davis and Mike for helping me out with essays. I could go and grab some material off the web, but I feel this is our newsletter for our members.
2. I want to apologize to the readers for a comment made in this column last issue. I made a tongue in cheek comment about the pandemic and obviously bit my tongue. I am sorry if I offended anyone. I know of at least one since they emailed me. I really appreciated the feed back. I want to be clear. I graduated from Iowa State College of Veterinary Medicine in 1971. I have spent the last almost 50 years fighting microbes of one kind or another. One thing I know about microbes, they do not care. They are only after one thing and that is the next host. They never sleep, take vacations, or get diverted easily. Managing disease outbreaks is tough and good people get hurt all the time. In 2001 I was in The United Kingdom trying to eradicate Foot and Mouth Disease. The papers were full of the destruction to livestock and to the farmers. The papers did not spend as much time on the trickle down destruction to the small businesses such as the pubs and restaurants in small towns shutdown due to lock downs. We are seeing the same kind of trickle down to the small businesses that we use, when we fish. My heart goes out to the guides, fly shops, restaurants, and motels we use every year under normal circumstances. I hope they can weather the storm. I am in that age group that is considered at risk. I also have children and grandchildren with some pre-existing conditions. I am protecting my family and hope you are protecting yours.
3. On a lighter note. I have included some photos taken in Yellowstone National Park. In 1971 we moved to Great Falls, MT and were there for a year. I did not fish during that year. My mind was on Veterinary Medicine and nothing else. Since we came back to Iowa, Donna and I try to go to or through Montana at least every two years. One of our favorite things to do is to visit Yellowstone in that hour just before dark. "The Magic Hour" In late September the elk will gather prior to the rut. The fishing can also be good. See the photo below that Donna took on Riverside Dr. four miles in from the West Yellowstone Gate. I was fishing and she was sitting in the car, when a black bear came down the ridge for a drink. The bear was quickly replaced by the bull elk you see in this photo. Good times will return.

Waiting for a tug,

Don

Fly Fishing Rough Fish

by Davis Horton

Suckers & Buffalo: Tips and Tricks for Targeting The Underappreciated

Many people refer to suckers and buffalo as trash fish. In reality, they are some of the most essential native fish species in our rivers and streams. Suckers and Buffalo are bioindicators, or organisms whose presence in a given ecosystem can reveal the quantitative health of the inhabited environment. A few ways in which suckers and buffalo tell us whether or not an ecosystem is healthy:

- Both suckers and buffalo must have free flowing, unimpeded waterways to make their annual spring spawning migration. They cannot migrate in dammed environments where flow is reduced.
- Most suckers and buffalo need clean, clear water to be able to forage among the substrate and throughout the water column properly. Some species can tolerate pollution, but our rarest individuals like the black redhorse sucker, are absolutely intolerant of pollution, siltation, turbidity and low gradient water ways.
- Buffalo can grow to be quite old. In a recent study from May of 2019, researchers found that bigmouth buffalo can age past the century mark in the wild under optimal conditions (Lackmann, A.R., Andrews, A.H., Butler, M.G. et al.). Improved age analysis revealed that one individual in the study was 112 years old (Lackmann, A.R., Andrews, A.H., Butler, M.G. et al.). In other words, that fish was alive when Teddy Roosevelt was still in office. A 112 year old fish reveals a lot about the health of an environment. A dirty ecosystem would not allow for longevity like that.

Suckers and buffalo get a bad rap because they can be pesky for gear guys. They have a certain annoying willingness to eat night crawlers, dead shad, or even lures when conventional anglers are targeting sport fish. They are often a negative bycatch in the eyes of the beholder. It turns out these species can be WAY fun on fly rods though. Always remember to release these fish. They are native, beneficial to our ecosystems, and lovely sport fish. When targeting rough fish on the fly, consider these options:

Smaller is better:

Size 14-20 bead head or weightless nymphs fished under an indicator work very well for bigmouth buffalo that are foraging high in the water column, but not right on the surface. If you find a school of white suckers in a driftless creek, drag your nymphs low and slow. Make sure they tick bottom or you won't hook the fish. Suckers love to feed in the substrate so your fly needs to be there if you want to catch one.

Often times we target buffalo on dry flies during warmer months. Size 18-20 midge patterns, ants, or general black colored dries seem to do best. Wait for the school to surface and lead the group with a very soft cast. Be patient, they will take a LONG time to slurp a dry. You may even have to recast at schools as they continue cruising. Hexagenia, yellow sally, or other mayfly hatches also entice big buffalo. Have your mayfly dries ready for summer hatches.

If you find a school of suckers laid up on a sandbar feeding, my favorite fly is a pink and white clouser on a barbless gamakatsu b10s, size 14. The pink is for my vision AND the fish's sight. Make a short cast in front of the fish as it puffs sand. Drag your fly into the feeding lane. The dragging motion will make the fly look like a fleeing macroinvertebrate and the fish will be more than happy to pick it up (if it can see the fly). Make sure you strip set right away when the fly goes under the fish's mouth, you likely will not feel a bite because the takes are beyond subtle. Treat them like a freshwater bonefish.

Light tippet:

Suckers and buffalo have incredible eyesight. Weird, I know... Your tippet should be no heavier than 3x and most of the time the tippet is just dependent on the size of the fish you are targeting. If the fish is 5 pounds or larger, stick to the heavier tippet. Should you find yourself in a school of fun sized fish, lighten it up to 5x or 6x if you feel so inclined. Always use fluorocarbon for flies that sink. You will need to get down fast to hit a cruising fish on the nose. Always use mono for flies that float. You will want to keep the dry flies on the surface for as long as possible to ensure the fish has time to inspect and eat the fly.

Smaller fly rods:

Grab a 3 wt – 6wt rod for various applications and have fun with them. 8'6" 3 wt rods are my preferred rods for smaller dry flies in tributary streams with smaller buffalo, I like a 9' 4 wt for targeting suckers with small clousers or nymph rigs, 5 wt rods are the best all-purpose outfits for still water fishing or small rivers, and the 6 wt rods are generally for heavier flies in smaller river systems where current may be a factor.

If you are fishing large buffalo only (10+ lbs), I absolutely recommend an 8 weight or larger rod. Big buffalo are often caught in heavy current and to turn the fish is near impossible with a light rod. It's like dragging a 20 pound bluegill sideways in 1000 cfs level current. Not an easy task. Get a rod with incredible leverage for the big bruisers.

continued on next page

2 fly lines:

All I use when it comes to fly fishing suckers and buffalo are full intermediates, or full floating lines. The ONLY time I use full intermediate lines are when I choose to swing bigger shad streamers for large buffalo in heavy current below dams. Think Saylorville, Red Rock, etc. The fly needs to get down, so an intermediate line is necessary in situations where really heavy current is an issue. Otherwise, a full floater will do the job for all other applications

If you are interested in the buffalo article, here is the citation for the aging study:

Lackmann, A.R., Andrews, A.H., Butler, M.G. et al. Bigmouth Buffalo *Ictiobus cyprinellus* sets freshwater teleost record as improved age analysis reveals centenarian longevity. *Commun Biol* 2, 197 (2019). <https://doi.org/10.1038/s42003-019-0452-0>

Davis

Fly Fishing Rock Creek, Montana

by Mike Jacobs

For years I have studied fly fishing magazines and books (yes, I'm old and old fashioned) to get information about potential fly fishing destinations. I love to go out west for trout fishing during September. Over the years a stream that has come up regularly in my reading is Rock Creek near Missoula, MT. Last year in September we ventured west to investigate the fishing opportunities on this beautiful stream. We stayed in a VRBO, south of Clinton, MT. that had landowner access (guests also) to the creek.

We arrived on Saturday and we got situated in our living quarters. We had a guided walk/wade trip scheduled for Monday (Labor Day) so we did some exploring on our own on Rock Creek during the day on Sunday. A dirt road parallels Rock Creek for nearly 50 miles providing easy access. There are a few short sections of private property but they are well marked. Sometimes you have a car pull-off right next to the stream, in other spots you just pull as far off to the side of the road as you can and then follow a trail or bushwhack through the trees and undergrowth to the stream. We fished a few of these roadside accesses as we explored on our own on Sunday. We didn't catch fish everywhere we stopped but we did discover some beautiful riffles, runs and pools. And we did catch some nice Westslope Cutts, Browns and Rainbows that helped to make our day.

On Monday our guide, Josh Ziegler, showed us some different access spots on Rock Creek that we would have never found on our own. Plus he showed us the techniques and flies to get us into fish regularly. For the day we caught plenty of Westslope Cutts, Browns and a few Rainbows.

Although hiring a guide isn't cheap, the true value of spending a day with a guide is all of the knowledge you can end your day with. A guide will show you fishing spots, new fishing techniques, and new flies to try. The primary reason for me in hiring a guide was to have him show us spots we could fish later in the week on our own. Additionally, he showed us where to find the fish in the runs and pools and then how to approach and fish them. Remember, these waters are not like any waters we fish in Iowa. During the rest of the week we fished Rock Creek in several spots Josh had shown us, that had quickly become our favorites. Plus we fished some of the water at downstream accesses closer to the Clark's Fork River as well as the water that bordered the property where we were staying. We averaged 20 or more fish each per day with some of our largest Westslopes in the 16" to 18" range. If you go, the accompanying map points out a few good spots (Microburst area, Concrete Bridge, Ghillies Bridge) to test but trust me, if you put some miles on the vehicle and put in some legwork you'll be rewarded with fish.

If you go I'd suggest that you stay in or near Phillipsburg, MT. You'll be closer to most of the good fishing areas than we were.

There are a couple good fly shops nearby: Rock Creek Mercantile close to where Rock Creek empties into the Clark Fork near I-90, and Flint Creek Outdoors in Philipsburg. At each of the shops you can pick up some flies, tippet or whatever you might need.

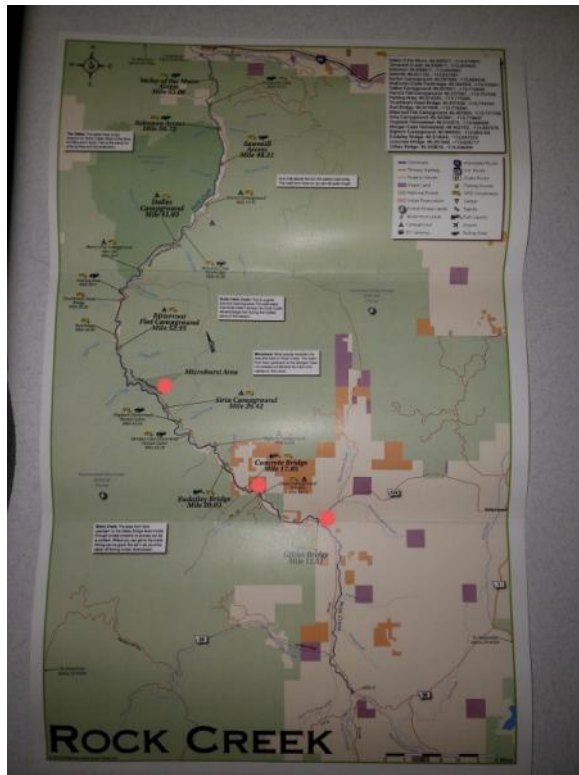

A fly rod in the 4-6 weight range will be good, preferably 8.5 feet or longer (better for fly line mending). 9 foot leaders with 4'X-5X tippet are all you'll need. Make sure to carry extra 5X tippet. You need a minimum of hip waders (or chest waders) with studded cleats. A wading staff is a good accessory item to have because the water is very fast and rocks are a little slick. For flies we mainly used a hopper/dropper style of setup the majority of the time. A Chubby Chernobyl (tan) #6 was the lead fly with a tungsten bead, Jigged Pheasant tail nymph #16 as the dropper. About 16" of 5X tippet separates the two flies. We caught fish out of some surprisingly fast runs, mostly on the dropper fly. Other flies that worked for us were Elk Hair Caddis #14, Purple Haze dry #14-16, Humpy #16 and a Parachute hopper #6. We also had success with a local variation of a Prince Nymph tied with a purple body.

Rock Creek is easy to access off I-90 then dropping down to Philipsburg. Personally I'd much rather drive I-90 any day compared to heading west on I-80.

There are many other rivers and streams to explore within a couple hours drive of this area including a remote gem (suggested by our guide Josh), the North Fork of the Blackfoot, not far from Ovando. The North Fork of the Blackfoot will be the subject of a story from me in the future.

I hope you get a chance to fish Rock Creek as I know you won't be disappointed. I would recommend you hire a guide for your first day.
